Overview

1. **Conceptualization**: The emergence of the “Anthropocene” and the “end of environmentalism”
2. **Propositions**: “Earth system governance” as new issue area of political science
3. **Research Practice**: The Earth System Governance Project (and Future Earth)

Biermann, *Earth System Governance: World Politics in the Anthropocene*, MIT Press 2014

An aerial night photograph of a city, showing a dense network of streets and buildings. The city is illuminated by numerous lights, creating a vibrant, glowing pattern. The lights are concentrated in the central and lower-right areas, with some trails of light suggesting traffic movement. The overall scene is dark, with the city lights providing the primary illumination.

Welcome to the Anthropocene

Geology's new age

The Emergence of the “Anthropocene”

“The End of Environmentalism”

From early environmentalism towards

... a planetary perspective

“The earth operates well outside the normal state exhibited over the past 500,000 years. ... **Human activities could ... trigger severe consequences for Earth’s environment** ... potentially switching the Earth System to alternative modes of operation that may prove irreversible and **inhospitable to humans.**”

2001 Amsterdam Declaration of the
International Geosphere-Biosphere Programme

Major conceptual declarations and papers:

- Compare the impact of “humanity” to “planetary-scale geological processes such as ice ages” (2012 Planet under Pressure Declaration, see Brito and Stafford-Smith, 2012)
- Speak of “human-driven change” without differentiating between diverse social groups and regions (2001 Amsterdam Declaration, see Moore et al., 2001)

- The Anthropocene lens needs to be contextualized: as a view of the planet as an interconnected, interdependent social-ecological complex while taking into account both **local variation** and **social inequalities**.
- ***Better Understanding***: Only a contextualized, localized and social conceptualization of the Anthropocene helps to better understand global interconnections and disparities.
- ***Better Governance***: It also helps to develop effective multilevel and polycentric governance solutions that (a) decrease the human impacts on the planet and (b) increase well-being particularly in the most impacted societies.

Earth System Governance

An Emergent Earth System Governance?

From Old-Style Government to New Politics

Crisis of Sustainability Governance

Calls for Action

- *2011 Nobel Laureate Symposium on Global Sustainability* urgently called for “strengthening earth system governance”.
- The *2012 State of the Planet Declaration* called for “[f]undamental reorientation and restructuring of national and international institutions ... and ... to move to effective earth system governance.”
- *International Council for Science* in 2012 requested governments to fundamentally “overhaul” the entire UN system.

Towards a Dynamization of Governance *Research*

Earth System Governance Research:

- **an empirical-analytical research programme,**
describing and explaining **current** governance processes **at all levels**
- **a normative research programme,**
exploring necessary governance transformations to keep human-nature co-evolution within parameters that sustain human life on earth

The Normative Challenge of Earth System Governance

A close-up photograph of a fried egg on a dark surface. The egg white is spread out, and the yolk is a vibrant orange-red color. The yolk is shaped like a globe, with the continents of Africa and South America visible in a darker red hue. The background is dark and slightly out of focus.

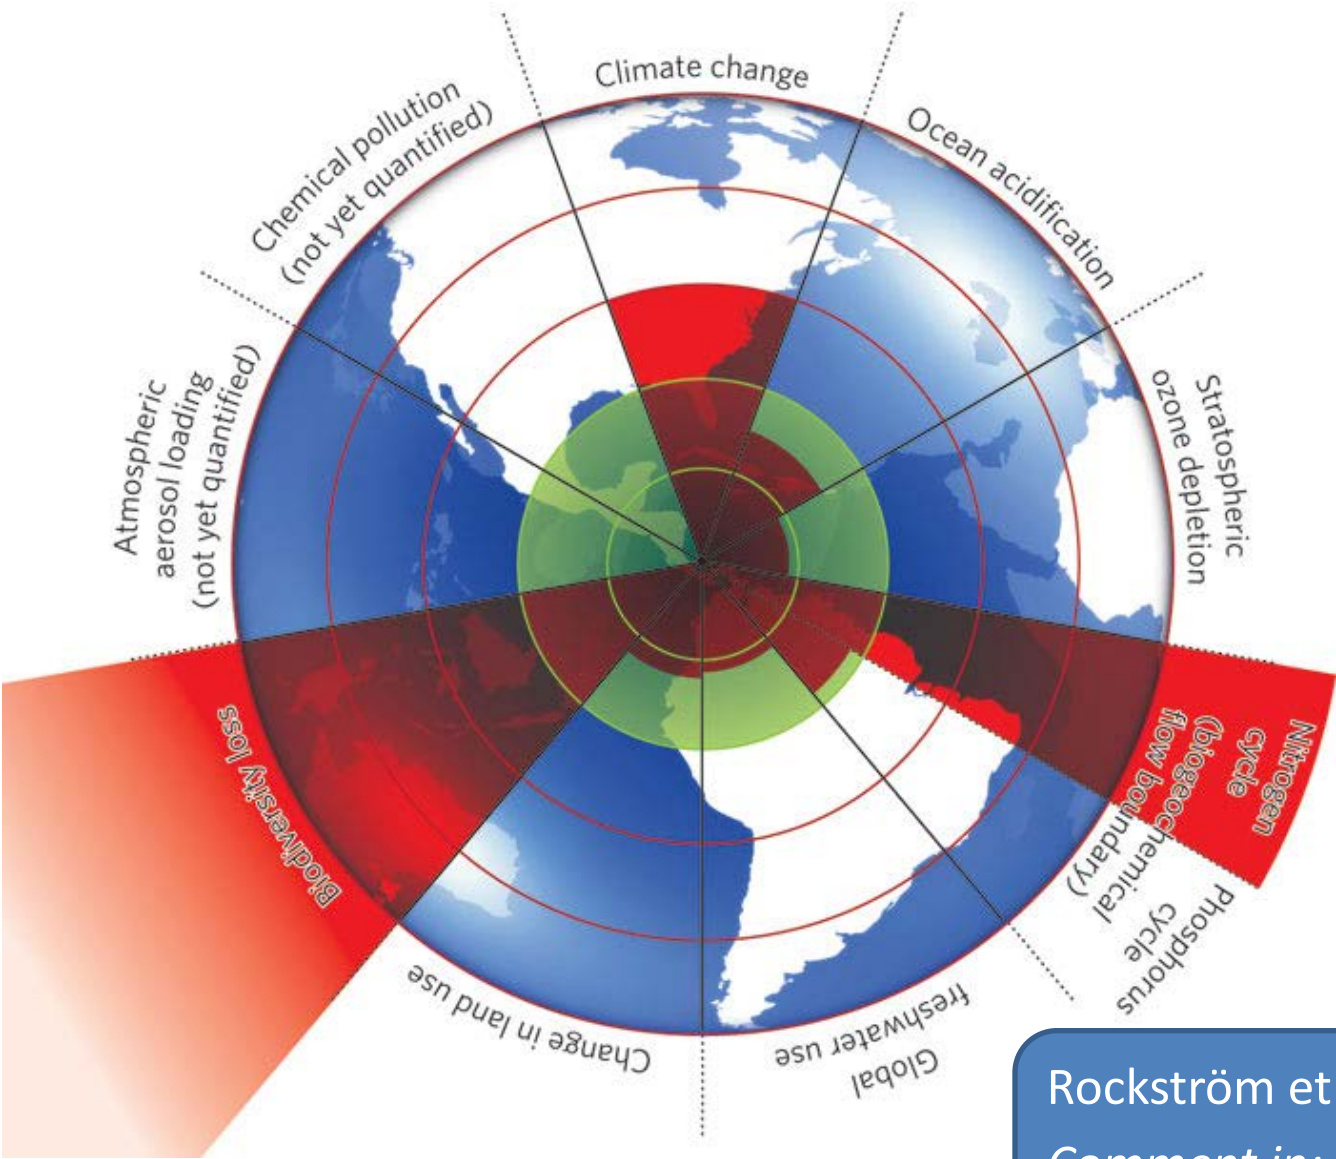

**How Do
You Want
Your Earth?**

Scientists now agree the planet is being pushed past its sustainable boundaries. Are we listening?

DECLARATION BY UNITED NATIONS

PREAMBLE

WE the peoples of the United Nations have determined to live in peace with one another and to promote well-being, to reaffirm our faith in the fundamental principles of human rights, in the dignity of the human person, in the equality of all races and of all peoples, and to establish a just and lasting peace in which security should be maintained by co-operation in peace among all nations.

ARTICLE I

The purposes of the United Nations are:

- to maintain international peace and security, and to that end to prevent the outbreak of war and to suppress all acts of aggression or other illegal uses of force, and to bring about a just and lasting peace by which the rights and interests of all nations may be secured;
- to develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples;
- to achieve international co-operation in solving economic, social, cultural, educational and other problems and to promote and encourage economic and social progress and development;
- to be a center for harmonizing the actions of nations in the attainment of these common ends.

(The text continues with more articles and signatures in cursive script, including names like 'The Secretary-General', 'The President of the United States', etc.)

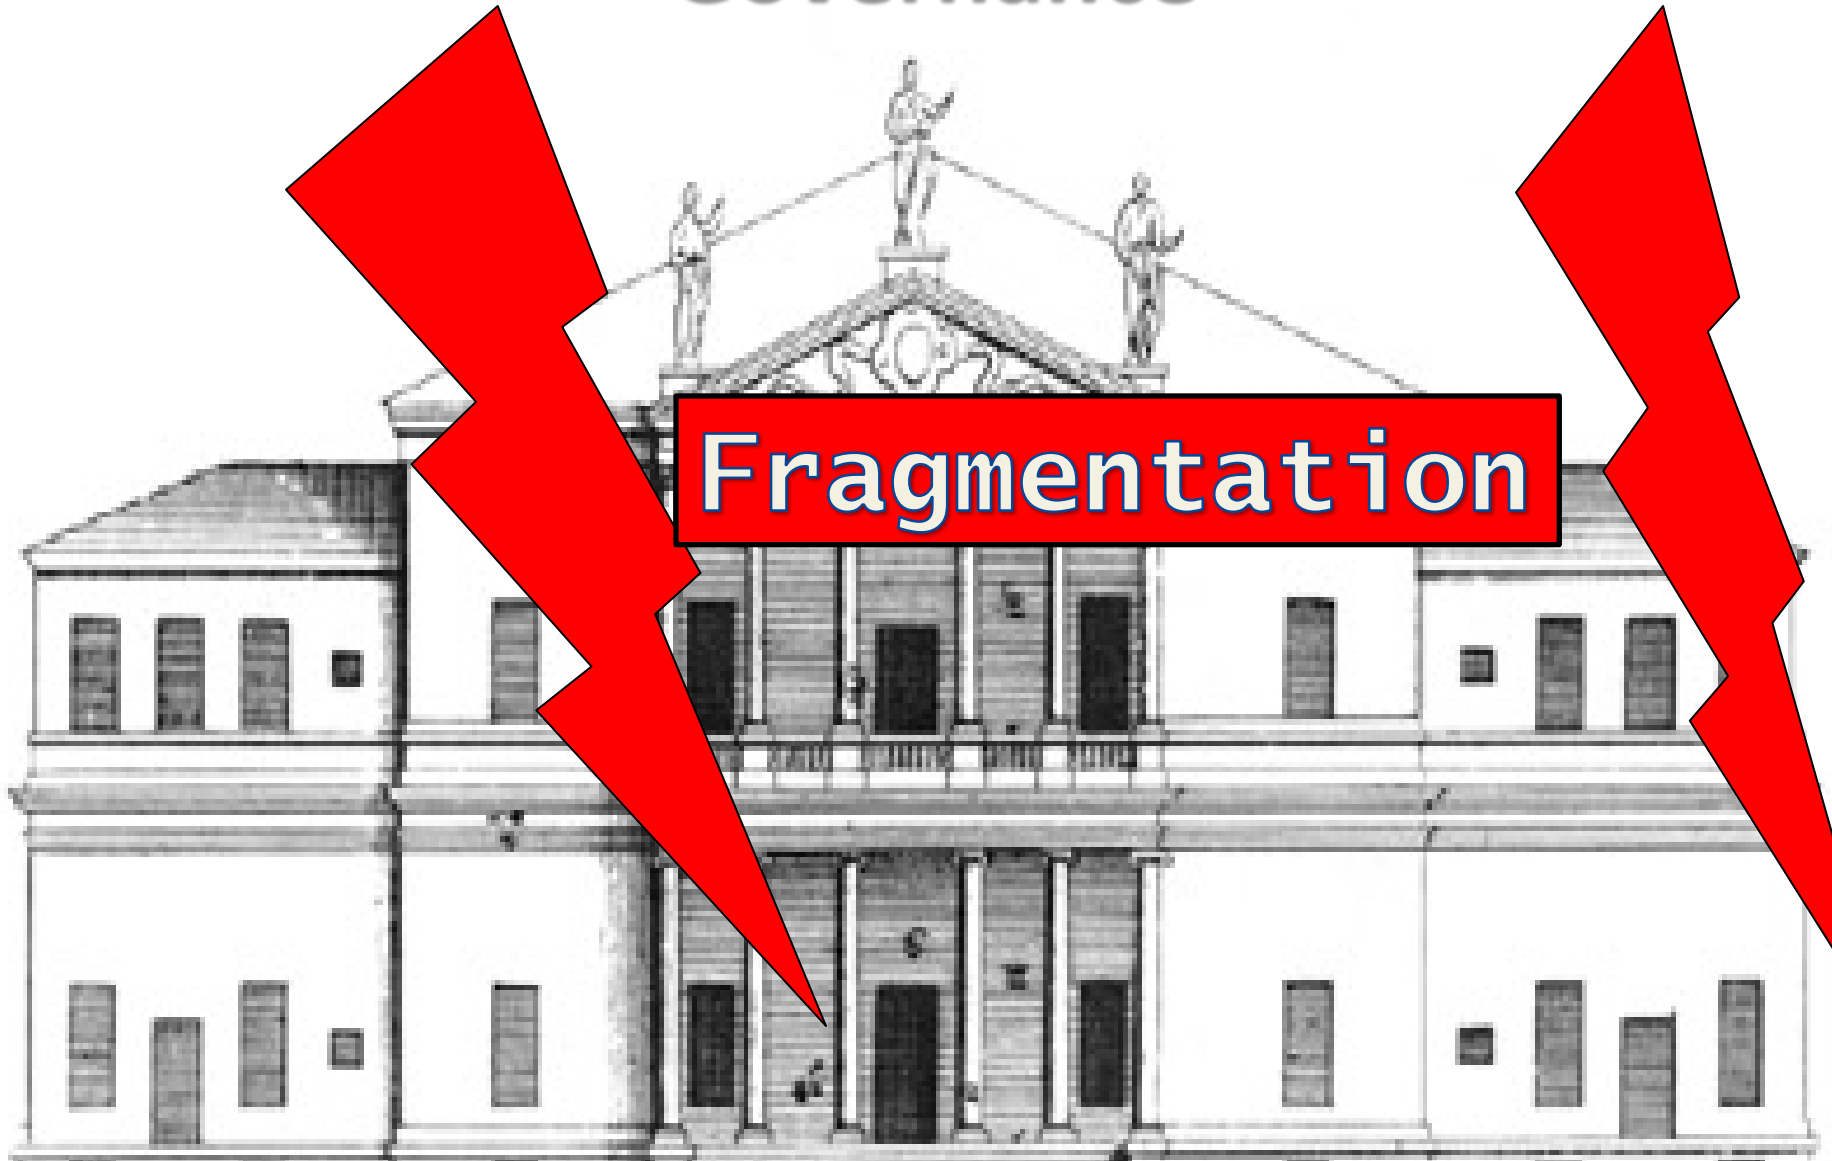

Reform: A World Environment Organization

- **Function:** Strengthening environmental pillar in earth system governance by creating specialized agency, similar to WHO, ILO, FAO, etc.
- **Proposal: A World Environment Organization**
 - Upgrade of UN Environment Programme to full agency status
 - Mandate to negotiate new treaties (model ILO, WHO)
 - Oversight over implementation of treaties
 - Possibly oversight over coordination of multilateral environmental agreements (WTO model)
 - Assessed financial contributions

Architectures of Earth System Governance

Fragmentation

The Fragmentation of Global Governance Architectures: A Framework for Analysis

Frank Biermann, Philipp Pattberg, Harro van Asselt, and Fariborz Zelli¹

Introduction

Most research on global governance has focused either on theoretical accounts of the overall phenomenon or on empirical studies of distinct institutions to solve particular governance challenges. Only very recently have scholars begun to investigate the middle level, that is, larger systems of institutions and governance mechanisms in particular areas of world politics, which are sometimes referred to as regime complexes, clusters, or networks.² In this article, we conceive of such clusters of norms, principles, regimes and other institutions as the “governance architecture” of an issue area.³ We focus our analysis on one aspect of global governance architectures that, we argue, is turning into a major source of concern for observers and policy makers alike: the “fragmentation” of gover-

Coping with Fragmentation

- Exploring avenues for **increasing governance coherence**
- Accepting **continued relevance of multilateralism** and the United Nations system, while acknowledging reform needs
- Exploring **interlinkages** between intergovernmental and non-state institutions

Transforming the UN System: A UN Sustainable Development Council?

- High-level organ within United Nations
- Integrate global environmental and economic policies
- Guidance among others to Bretton Woods organizations

Reform: Strengthening international environmental treaties

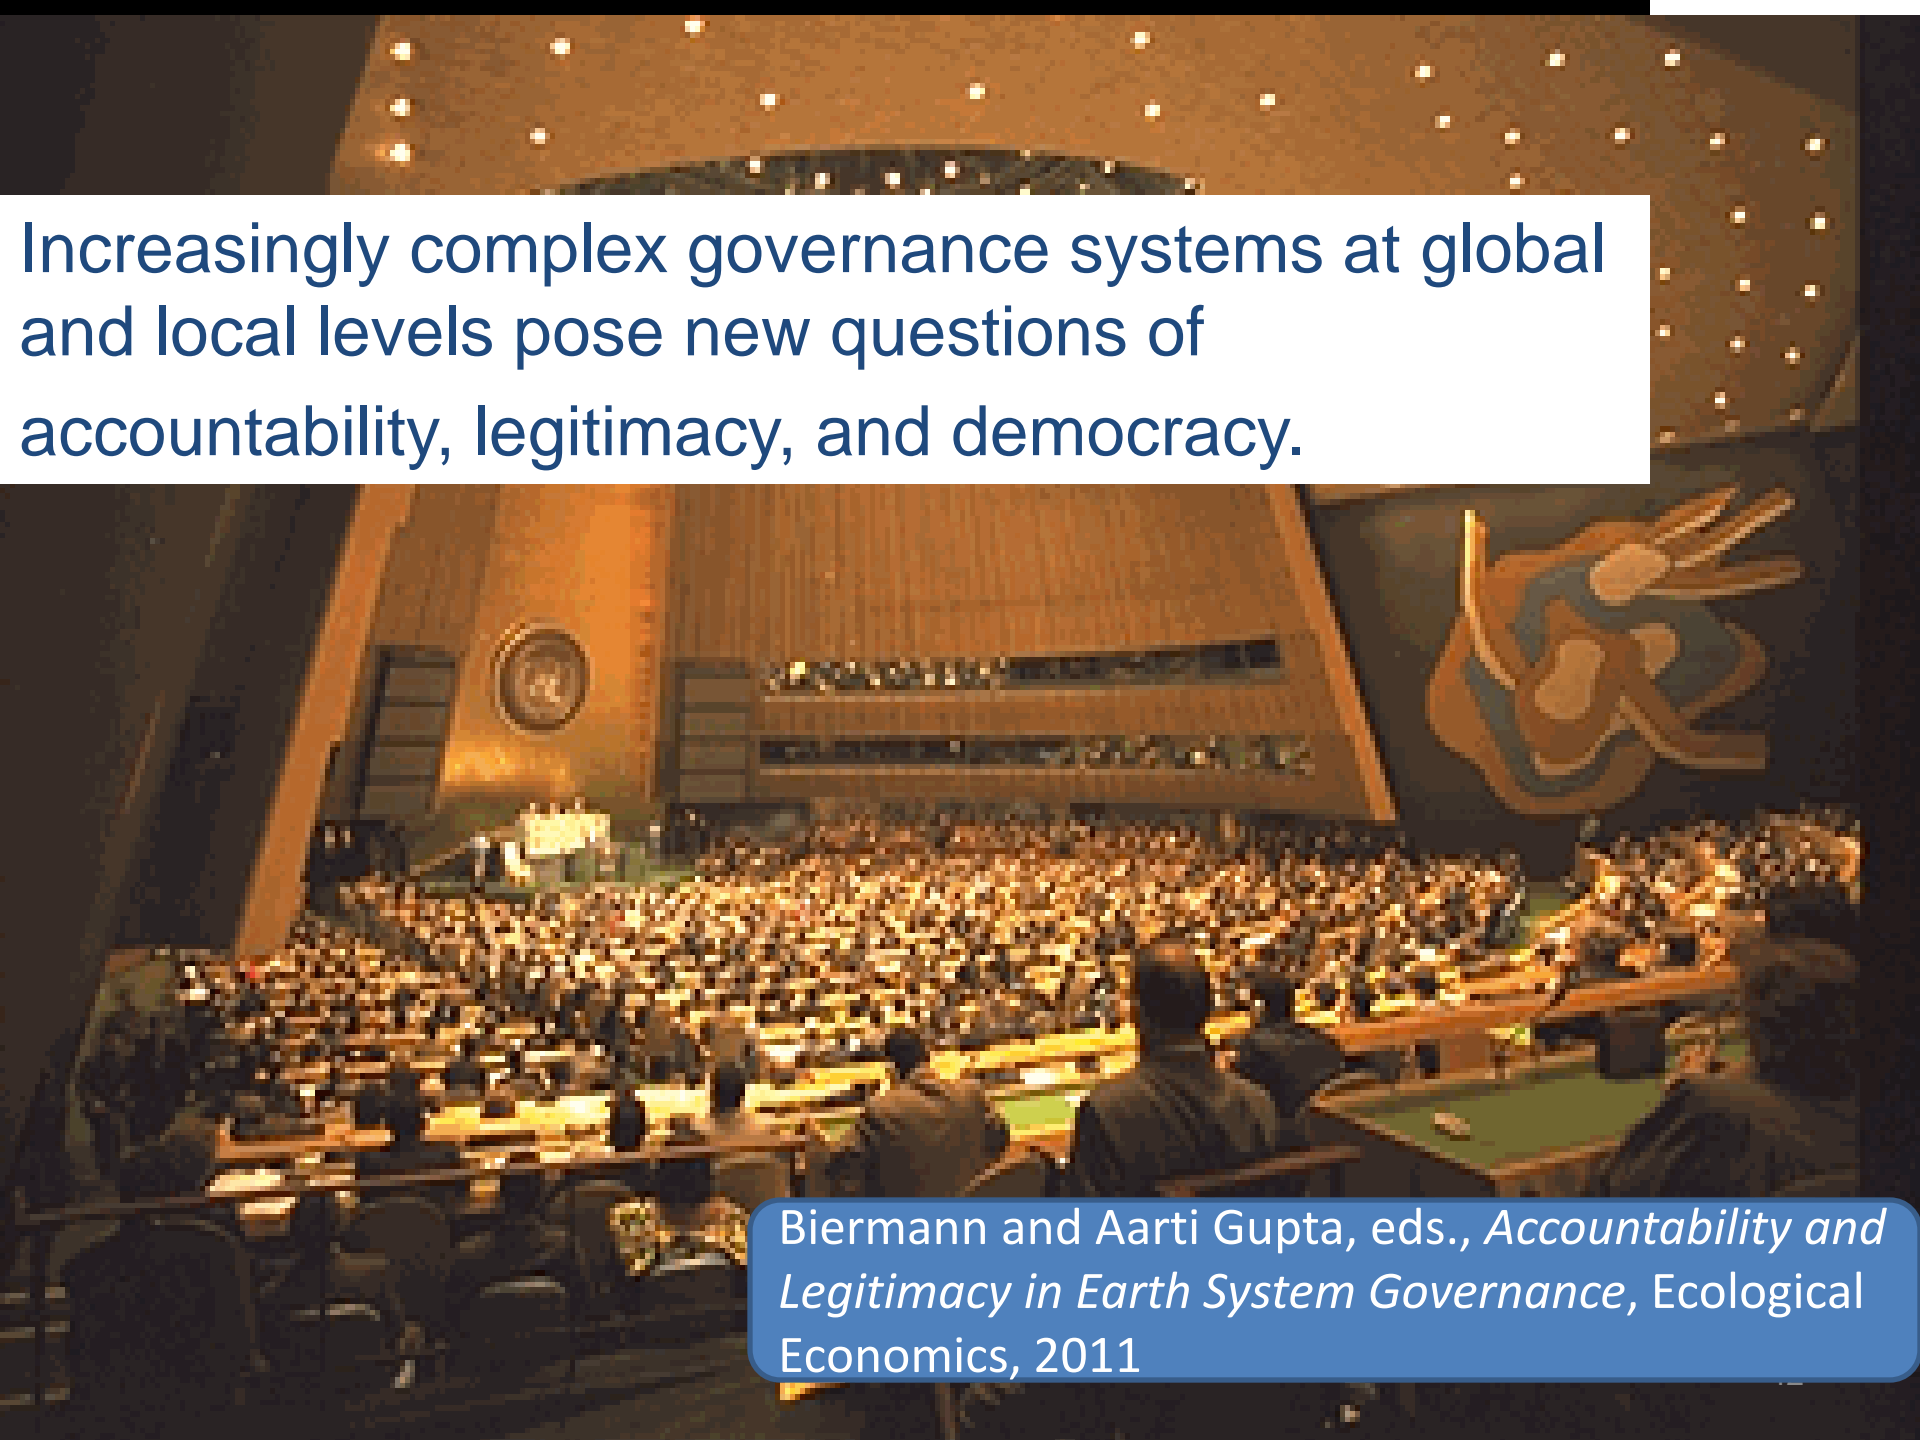

- Governments must engage in **structural reforms** in how environmental negotiations are conducted and treaties designed.
- Present and future treaties must rely more on **qualified majority voting** in specified areas.

Biermann et al., *Science*,
16 March 2012

Problems with Weighted Voting

- One country, one vote?
 - ~5 % of human population combine 50% of the votes
- One person, one vote?
 - 7 countries combine 50% of the votes
 - 186 countries combine the other 50%
- Different majority and voting rules for different issue areas?
- Multiple, complex, combined, or layered majorities?

A large, ornate assembly hall with a high, vaulted ceiling and a large audience seated at desks, facing a stage with a large mural.

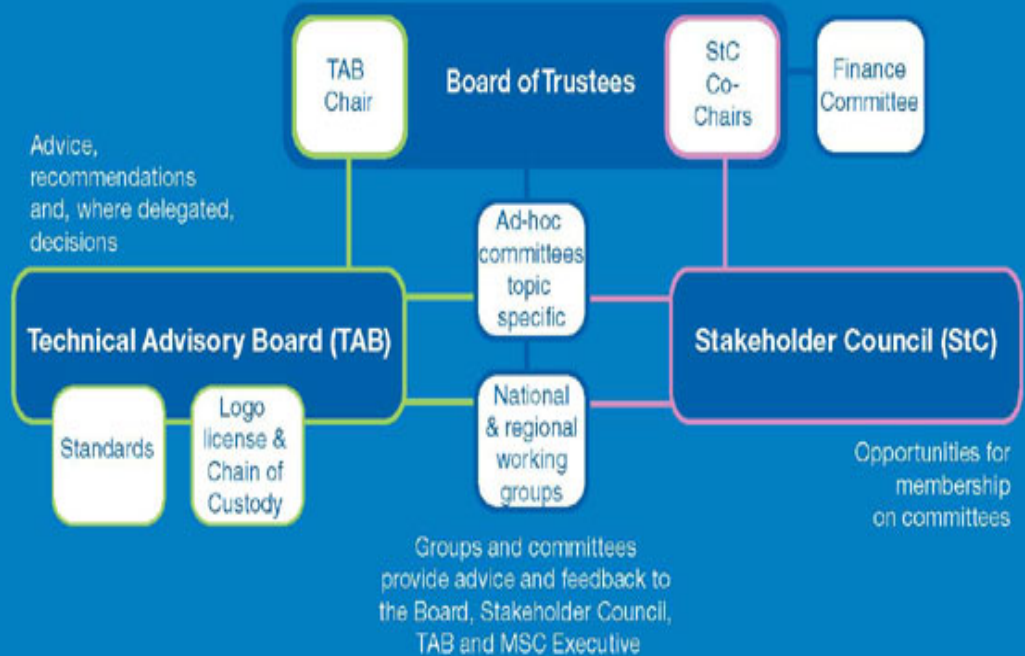

Increasingly complex governance systems at global and local levels pose new questions of accountability, legitimacy, and democracy.

Biermann and Aarti Gupta, eds., *Accountability and Legitimacy in Earth System Governance*, Ecological Economics, 2011

MSC GOVERNANCE STRUCTURE

The MSC Executive supports all of the bodies shown below and reports to the MSC Board of Trustees

Biermann and Aarti Gupta, eds., *Accountability and Legitimacy in Earth System Governance*, Ecological Economics, 2011

- Global institutionalisation and regulation require novel accountability mechanisms.
- Options include
 - A Global Forum of Civil Society
 - A World Parliamentary Assembly
 - Global Deliberative Assembly

A photograph of a protest at night. A banner with the text "ONLY CLIMATE" is visible in the background. The scene is dimly lit, with some lights visible in the distance. The banner is white with black text. The background shows a dark sky and some structures, possibly a stadium or arena.

ONLY CLIMATE

But what is “just”
in earth system
governance?

Adaptiveness: In the end ...

we might need to prepare for a (much) warmer world

An Emerging Discourse of Climate Crisis

- “Given that [the 2° target] is an ambitious target, ... we should be prepared to adapt to 4 degrees.”

R. Watson, The Guardian, 2008

- “Society may be lulled into a false sense of security by smooth projections of global change.”

Lenton et al. 2009

- “Planetary boundaries” have been violated in the case of climate change/global warming.

Rochström et al. 2009

The Dutch Way?

Adaptation is costly in the North

Too costly for the South?

- 200-250 million climate refugees by 2050 according to Myers
- “Hundreds of millions” according to Stern Report
- 1 billion according to Christian Aid
- 12 million from Egypt by 2050
- 250 million at risk in Ganges Brahmaputra

PROTECTING CLIMATE REFUGEES

The Case for a
Global Protocol

BY FRANK BIERMANN AND INGRID BOAS

Preparing for a Warmer World: Towards a Global Governance System to Protect Climate Refugees

Frank Biermann and Ingrid Boas¹

Introduction

The need to mitigate climate change has dominated the debate on global environmental governance until very recently. It is now evident that mitigation efforts have been too little and too late. Climate change is a reality of world politics in the twenty-first century. This reality requires a new, additional focus in both academic research and policy planning: how can we build over the course of the next decades systems of global governance that will cope with the global impacts of climate change? What institutions are in need of redesign and strengthening? To what extent, and in what areas, do we need to create new institutions and governance mechanisms from scratch?

Not much policy research on these questions is available.² In light of the most recent scientific findings, which indicate possibly accelerating climatic change, there is thus an urgent need for a new academic research program on what we propose to call "global adaptation governance." Global adaptation governance will affect most areas of world politics, including many core institutions and organizations of current global governance. The need to adapt to climate change will influence, for example, the structure of global food regimes and the work of the UN Food and Agriculture Organization (FAO); global health governance and the agenda of the World Health Organization (WHO);

1. This research was funded by the European Commission (Global Change and Ecosystem Priority of the Sixth Framework Research Programme, Integrated Project "Adaptation and Mitigation Strategies, Supporting European Climate Policy" [ADAM Project], Contract no 018476). For valuable suggestions and comments, we are grateful to Harro van Asselt, Steffen Bauer, Klaus Dingwerth, Artti Gupta, Mike Hulme, Henry Neufeldt, Sebastian Oberthür, Kate O'Neill, Philipp Parberg, Fariborz Zelli, and the reviewers and editors of *GEP*. In addition, Frank Biermann wishes to thank The Energy and Resources Institute, New Delhi, for generous hospitality during a research visit in September and October 2007 where most of his research for this article was undertaken. More information is available at the website of the Climate Refugee Policy Forum, a new initiative set up by the Global Governance Project, a joint program of twelve European research institutions, at <http://www.gi.gov.org/?pageid=80>.
2. See Biermann 2007 and Biermann and Parberg 2008 for reviews of global environmental governance research.

The Earth System Governance Project as a global research network

The Earth System Governance Project is ...

- ... an **international research network** to study the governance dimensions of environmental change and earth system transformation;
- ... endorsed and supported by **leading global research organizations**;
- ... **open to anybody** who is interested in exploring these issues;
- ... today the largest **research alliance** in the field.
